MEMORANDUM FOR THE RECORD

SUBJECT: Summary of the 1987 ISSD/State Department
Computer Security Conference

1. The ISSD/State Department Computer Security Conference was held at the Interagency Training Center (ITC), Fort Washington, Maryland, on 3 April 1987. The attendees were:

ISSD

STATE

Lynn McNulty
Jules Romagnoli
Bill Donovan
Betsy Markey
Steve Newberg
Pete Stella
Peter Winters
John Munson
Ed Roback
Eric Levine
Roger Joyner
Dick Condon
Scott Smith
Thomas Chace
Cecilia Sodhi

After opening remarks by Paul Yorkdale (ITC), [redacted] C/Information Systems Security Division (ISSD)/CIA, described the mission of ISSD's five branches and the purpose of the conference - to exchange information.

3. Lynn McNulty, C/Office of Information Systems Security (ISS)/State, discussed the critical nature of computer security. He expressed concern that we may not be giving computer security the proper attention now because of such

distractions [redacted] He expressed the opinion that security disasters of the 1990's will involve computer networks that will overshadow the Embassy-type disasters of today.

4. Lynn also described his organization as one of three offices under Security Technology (ST) which is, in turn, under the Deputy Assistant Secretary, Director of Diplomatic Security Services. ISS is divided into three branches: Policy and Training Branch, Evaluations Program Branch, and Systems Branch. Betsy Markey, Bill Donovan, and Jules Romagnoli are their respective chiefs.

25X1

5. [redacted] C/ISSD/Agency & Community Systems Branch (A&CSB), discussed Simpack's work with respect to the volume overwrite and file overwrite for the Wang Alliance systems. He indicated that Simpack had recently delivered the volume overwrite program, and that they were currently working on the file-over program (i.e., messages, files, visual memory cabinets). He also discussed work to obtain audit data.

6. Jules Romagnoli, C/ISS/Systems Branch, discussed the Foreign Affairs Information System (FAIS). He said that the FAIS was being developed to satisfy the information needs of ambassadors and diplomats with a fourfold goal: integrate office automation, meld data processing and telecommunications technology into a unified system, develop an evolving systems approach beginning with existing programs, and use information technology to manage foreign affairs information resources and provide security. Jules also discussed FAIS design objectives, assumptions, constraints, and system architecture.

7. Of particular interest to ISSD was Jules' conviction regarding the importance of "putting security into the system initially, not as a retrofit." He said, in the case of FAIS, they had this opportunity - security was a driving force in its design: FAIS would be State's system for years to come. Jules concluded with remarks about his first-hand investigation related to the information system damage assessment evolving from the Marine Guard security lapse at U.S. embassies.
